OUR DETOX PROGRAM

The Clarity Way treatment program provides medically monitored detoxification within a comfortable, state-of-the-art facility. Clients embark on this first critical step in the recovery process within our peaceful and private South Central Pennsylvania setting, which includes upscale amenities and all the comforts of home. With only seven detox clients at a time, clients receive an unparalleled amount of one-on-one attention and care.

WHAT TO EXPECT

Detoxification from drugs or alcohol is different for everyone, but typically involves withdrawal symptoms that range from unpleasant to severe. At Clarity Way, our detox team is led by a board-certified addiction medicine physician, and our compassionate, highly trained staff provides attentive care around the clock. We use the latest research-backed medications and alternative therapies to help relieve withdrawal symptoms, as needed.

“ I am thankful everyday for the opportunity that I had to experience such an amazing facility and recovery philosophy.”

~ **Becky G. - Connecticut**

POST DETOX CARE

From detox through aftercare, we provide clients a completely customized continuum of care in a beautiful setting where their every need is attended to so that they can focus on recovery. Once a client safely detoxes from substances, we create a treatment plan that addresses the root cause of the addiction as well as the person's psychological, physical and spiritual needs.

OUR APPROACH

At Clarity Way, we apply the best in traditional and alternative therapies coupled with a full range of recovery-enhancing activities designed to treat the whole person. We respect each client's unique interests and beliefs and the pace at which they move down the recovery path.

Clients work with our treatment team to design a personalized program that focuses both on overcoming addiction and learning skills for sober living. We include activities that clients are interested in, that nourish their spirit, and that promote physical health and creative expression - all of which are essential in relapse prevention.
